Laser CosMedic Center

901 Heartland Road
(816) 271-6408

The Laser CosMedic Center offers state-of-the-art cosmetic procedures to those wanting to look and feel better. The facility was designed for you, the customer. Unlike other local providers, our new spa-like setting provides customers a relaxing and private atmosphere. Treatments are performed by LaserScope certified aestheticians and are safe and effective with virtually no down time. Our lasers are designed to meet the needs of a variety of aesthetic applications, including the treatment of spider veins, unwanted body hair, facial wrinkles, skin discoloration and acne.

spider vein treatment

Now the revolutionary new laser treatment with the Lyra laser system can quickly and safely eliminate spider veins in as few as three treatments, leaving your legs looking young and beautiful again. Best of all, the Lyra provides the most risk-free treatment for dark or tanned skin.

wrinkle reduction and skin rejuvenation

Enhanced skin rejuvenation is a wonderful, cost-effective alternative for patients who want a more youthful appearance without needles, surgery or weeks of recovery time. This gentle laser treatment is appropriate for the face, chest, neck and hands. It softens the appearance of fine lines and wrinkles, treats sun-damaged skin and improves age spots, rosacea, broken blood vessels and facial veins.

hair removal

The Laser CosMedic Center uses the most advanced FDA approved laser technology for permanent hair reduction, safely and effectively treating all ethnic origins and skin types including tanned skin. Unlike electrolysis, laser light is converted into heat, causing thermal damage to the follicle without harming the surrounding tissue. Most patients need 5 – 8 treatments for long lasting, optimal results.

facial peels

Our FineSkin laser peel or “lunchtime” peel is a safe and effective way to soften the appearance of fine lines and wrinkles. Even lingering effects of chicken pox, acne scars, superficial pigmented lesions and other surface inconsistencies can be successfully treated. It is a very mild peel with virtually no down time, and makeup may be applied within one hour of the treatment.

acne treatment

Acne can be safely and effectively treated using laser light to activate your body’s natural bacteria-fighting defenses, reducing the severity of current and future breakouts. Clinical data suggests that most patients find their acne will improve after the completion of a series of four treatments within a two-week time period. Many patients may experience benefits for up to three months, although repeated treatments may be necessary to maintain results.
